

$$(1) 17 - 8 = \square$$

A number bond diagram for 17, with 10 in a red circle on the left and 7 in a red circle on the right, connected by a green line above them.

$$(5) 15 - 6 = \square$$

A number bond diagram for 15, with 10 in a red circle on the left and 5 in a red circle on the right, connected by a green line above them.

$$(9) 12 - 4 = \square$$

A number bond diagram for 12, with 10 in a red circle on the left and 2 in a red circle on the right, connected by a green line above them.

$$(13) 13 - 9 = \square$$

A number bond diagram for 13, with 10 in a red circle on the left and 3 in a red circle on the right, connected by a green line above them.

$$(2) 17 - 9 = \square$$

A number bond diagram for 17, with 10 in a red circle on the left and 7 in a red circle on the right, connected by a green line above them.

$$(6) 13 - 8 = \square$$

A number bond diagram for 13, with 10 in a red circle on the left and 3 in a red circle on the right, connected by a green line above them.

$$(10) 12 - 6 = \square$$

A number bond diagram for 12, with 10 in a red circle on the left and 2 in a red circle on the right, connected by a green line above them.

$$(14) 15 - 7 = \square$$

A number bond diagram for 15, with 10 in a red circle on the left and 5 in a red circle on the right, connected by a green line above them.

$$(3) 18 - 9 = \square$$

A number bond diagram for 18, with 10 in a red circle on the left and 8 in a red circle on the right, connected by a green line above them.

$$(7) 14 - 7 = \square$$

A number bond diagram for 14, with 10 in a red circle on the left and 4 in a red circle on the right, connected by a green line above them.

$$(11) 16 - 7 = \square$$

A number bond diagram for 16, with 10 in a red circle on the left and 6 in a red circle on the right, connected by a green line above them.

$$(15) 17 - 8 = \square$$

A number bond diagram for 17, with 10 in a red circle on the left and 7 in a red circle on the right, connected by a green line above them.

$$(4) 11 - 2 = \square$$

A number bond diagram for 11, with 10 in a red circle on the left and 1 in a red circle on the right, connected by a green line above them.

$$(8) 18 - 9 = \square$$

A number bond diagram for 18, with 10 in a red circle on the left and 8 in a red circle on the right, connected by a green line above them.

$$(12) 17 - 9 = \square$$

A number bond diagram for 17, with 10 in a red circle on the left and 7 in a red circle on the right, connected by a green line above them.

$$(16) 16 - 8 = \square$$

A number bond diagram for 16, with 10 in a red circle on the left and 6 in a red circle on the right, connected by a green line above them.
