

● 次の分数のたし算をしましょう。

$$1 \quad \frac{2}{3} + \frac{5}{8}$$

$$= \frac{16}{24} + \frac{15}{24}$$

$$= \frac{31}{24} \left(1 \frac{7}{24} \right)$$

$$2 \quad \frac{1}{2} + \frac{7}{9}$$

$$= \frac{9}{18} + \frac{14}{18}$$

$$= \frac{23}{18} \left(1 \frac{5}{18} \right)$$

$$3 \quad \frac{3}{7} + \frac{2}{3}$$

$$= \frac{9}{21} + \frac{14}{21}$$

$$= \frac{23}{21} \left(1 \frac{2}{21} \right)$$

$$4 \quad \frac{3}{5} + \frac{5}{9}$$

$$= \frac{27}{45} + \frac{25}{45}$$

$$= \frac{52}{45} \left(1 \frac{7}{45} \right)$$

$$5 \quad \frac{3}{4} + \frac{2}{7}$$

$$= \frac{21}{28} + \frac{8}{28}$$

$$= \frac{29}{28} \left(1 \frac{1}{28} \right)$$

$$6 \quad \frac{7}{6} + \frac{2}{3}$$

$$= \frac{7}{6} + \frac{4}{6}$$

$$= \frac{11}{6} \left(1 \frac{5}{6} \right)$$

$$7 \quad \frac{5}{9} + \frac{11}{18}$$

$$= \frac{10}{18} + \frac{11}{18}$$

$$= \frac{21}{18} \left(1 \frac{3}{18} \right)$$

$$8 \quad \frac{7}{8} + \frac{13}{16}$$

$$= \frac{14}{16} + \frac{13}{16}$$

$$= \frac{27}{16} \left(1 \frac{11}{16} \right)$$
